**[CNE26] The Very Hungry Caterpillar 2**

# RUPSJE NOOITGENOEG

This route takes you through the Korte Duinen nature reserve. Over a distance of 4.5 kilometers, you'll find 12 caches. Numbers 8 and 12 are bonus caches, the coordinates of which can be calculated using the bonus codes at the top of the logbooks. You are free to walk on the roads and paths in this nature reserve. Dogs must be kept on a leash. Have fun!

---

**On a beautiful Sunday morning, the sun rose bright and warm. Plop! And from the egg hatched a tiny, hungry caterpillar. It set off to find food...**

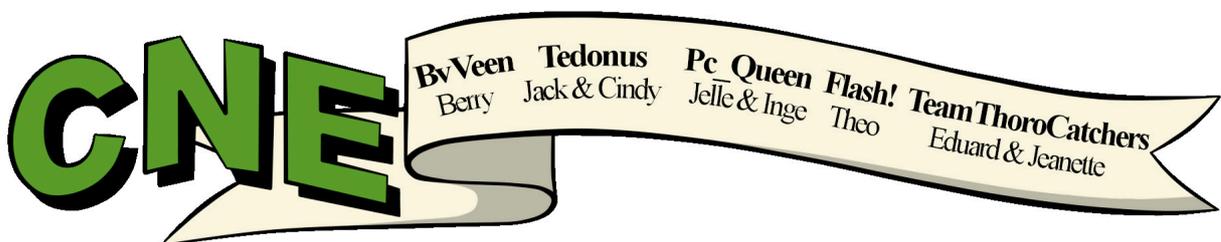

---

When a caterpillar hatches, its main goal is to eat. Because it eats so much, the caterpillar grows quickly and gains enough energy and weight to transform a tiny egg into a butterfly. The caterpillar grows and grows, and must molt regularly because its skin doesn't grow along with it. Before the caterpillar bursts out of its old, small skin, it has already developed a new one underneath, which hardens after molting. Caterpillars are mainly found from April to September. They live in gardens, parks, and along roads. Generally, caterpillars feed on the leaves of the host plant—the plant on which the butterfly has laid its eggs. Some species also feed on flowers or fruit, and some bore into the stem or root. They love vegetable plants, privet hedges, and geraniums. Corners with weeds, such as nettles or bindweed, are also suitable for caterpillars.
