[CNE26] The Very Hungry Caterpillar 11

RUPSJE NOOITGENOEG

This route takes you through the Korte Duinen nature reserve. Over a distance of 4.5 kilometers, you'll find 12 caches. Numbers 8 and 12 are bonus caches, the coordinates of which can be calculated using the bonus codes at the top of the logbooks. You are free to walk on the roads and paths in this nature reserve. Dogs must be kept on a leash. Have fun!

That large caterpillar built itself a little house, called a cocoon, and stayed there for over two weeks.

In the chrysalis, the caterpillar transforms into a butterfly. This is called pupation. During its final molt, the caterpillar develops a pupal skin. Inside the chrysalis, almost all parts of the caterpillar are broken down and reassembled into a butterfly. Exactly how this happens is not yet fully understood.

Pupation only occurs when the caterpillar is fully grown. This can occur hanging from a branch or leaf, on the ground, or sometimes underground. Many caterpillars leave their host plant to pupate in the soil or among dead leaves. Other species remain on the host plant and make a silk cocoon there, pupating among leaves, under bark, or even inside the plant.

The chrysalis appears dead because it is motionless, but it is not. If you touch a chrysalis, it may move or make a rattling sound. The major transformation into a butterfly takes place in the chrysalis. This can take anywhere from a few weeks to months.

This cache is part of a larger series
