CNE stands for the culture and nature event. The event took place on March 21, 2026, in Amersfoort. More information about CNE can be found at: www.cultuurennatuurevent.nl

With this event and these caches, we want to show everyone all the wonderful things Amersfoort and the surrounding area has to offer in terms of culture and nature. We hope you have lots of fun with these caches!

[CNE26] Birds of the Eemlanden 9

**Caution! This is a cycle path.
Motorized traffic is prohibited on a large portion of the route. This is
strictly enforced!**

North of Amersfoort, around Bunschoten-Spakenburg, lies a vast polder landscape. It's an open peat meadow area. This means plenty of grasslands, but also plenty of water. Ditches separate the meadows, which in turn flow into ditches. All this makes it an excellent spot for meadow and water birds, which also occur here in hundreds of numbers. This tour passes through two areas: De Eemland and Het Arkemheen. The latter is one of the oldest polders in the Netherlands, established in 1356. What's special about this polder is that it has never been subject to land consolidation. Winding ditches can still be seen here, in contrast to the straight ditches of the Eemland.

This approximately 35-kilometer bike ride passes through these bird-rich areas. Each cache tells about a specific bird that can be seen there. Inside the cache, you'll also find a bird, but it's different from the one listed. You need this bird to determine your bonus. The value is the number of the cache for that bird.

Example:

In the first cache, you'll find a black-tailed godwit, along with an A.

Cache number 8 tells you about the black-tailed godwit.

So, A=8.

Enjoy this bike ride through the bird-rich Eemlanden and don't forget your binoculars—it's definitely worth it. You might spot some of the caches there.

Skylark

The skylark (*Alauda arvensis*) is a small brown meadow bird. They have a light brown plumage with a streaked breast and upperparts. They have a relatively short orange beak. The most striking feature of the skylark is its song. It is highly varied and they can sustain it for several minutes. This song also allows them to imitate other birds. They are found in open landscapes, such as grassland, heathland, and dunes. Some breeding birds migrate south. In October, they go to France and England. At the same time, skylarks from the north arrive to overwinter here. In February and March, this reverses, and the breeding birds return to the country. Unfortunately, the skylark is in decline. In the past sixty years, we have lost 95% of the breeding birds, leaving only about 40,000 breeding pairs. The situation has stabilized in the last ten years.

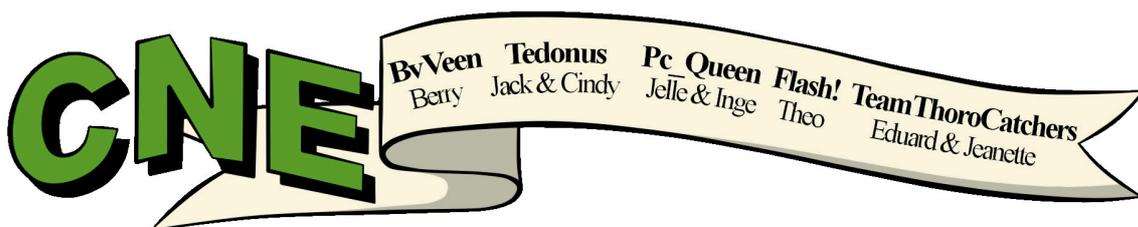

The municipality of Nijkerk has given permission for this cache.

Thank you for this.

This cache is part of a larger series
